

lecture 8:-

Kleene Theorem

if A language can be expressed by.

1- FA or

2- TG or

3- RE.

then it can be expressed using the other three forms.

$\boxed{RE \rightarrow FA \rightarrow TG}$

PART 1:- Every language that can be expressed using FA can also be expressed using TG.

Nothing to prove since every FA is a TG.

PART 2:- Every language that can be expressed using TG can also be expressed using RE.

CONSTRUCTIVE ALGO:-

STEP 1:- Create a Unique Start State.

STEP 2:- Create a unique final state.

Step 4:- State Elimination.

step 11 state elimination -

$$\gamma_2 \gamma_4^* \neq \gamma_4^* \gamma_2$$

Ex:-

Ex 2:-

Ex. .

$(a+bb)a^+ + (b+aa)b^+ .$

Ex4:-

*

प्रश्न:-

(q, p)

$((q, p))$

$((ab+ba)(aa+bb)^*(ab+ba) + (aa+bb)^*)$ ✓ -
